Officials: Seniors' data not breached

By SCOTT BAUER
Associated Press

The security of a database containing sensitive information about 240,000 senior citizens and disabled people in Wisconsin was never breached or at risk, the chief executive of the company that controls the data said Thursday.

A top official with the state Department of Health and Family Services also sought to assure senior citizens, saying their personal information was never in jeopardy.

The statements came in spite of an e-mail from a state official who said he had identified a "significant security hole" with the database and a comment from a senior center volunteer who said he had found a problem that could lead to thousands of records being compromised.

That volunteer, longtime state Department of Health and Family Services employee Fred Buhr, said he was able to see data files of people from around the coun-

try. Even though Buhr said he didn't open them, he believed they could have been viewed, altered or deleted.

Tonya Harmon, CEO of Virginia-based Harmony Information Systems, said the system has never been breached. She said Buhr is mistaken if he thinks the information was vulnerable.

"The state and I both agree that there has been no security breach," she said. "No client data has been exposed at all. The gentleman is mistaken in what he thought he could have seen or done."

Buhr, who worked on data security for the state during his 41-year career before leaving in 2006 and starting his own data security company, disagreed with Harmon.

"I believe that I could have deleted a whole file," he said Thursday. "I believe that I shouldn't have been able to see the Texas files."

Buhr was working as a volunteer entering data into the system from the McFarland senior center. The information on the database could

have been viewed by 400 similar volunteers across the state and perhaps others who have access to the system across the country, he said.

DHFS executive assistant Rea Holmes said even though Buhr could see the icons, he did not have the proper access to open or move them. The company has since changed the program so even the icons aren't visible, she said.

"We take this very seriously," Holmes said. "Whenever there is a potential risk we make sure we work with the company right away. In this case, there was never a data breach."

Karl Schlenker, who oversees the Harmony database for DHFS, said in a March 3 e-mail to Buhr that he had identified at least two problems with the system.

In the e-mail, provided to The Associated Press by Buhr, Schlenker describes standing up at a conference attended by users of the software to "loudly declare that a significant security hole existed and must be imme-

diately addressed. (That particular hole was fixed within the same week.)"

He goes on to tell Buhr that he knew about the other problem that Buhr brought to him.

Schlenker said he was working with Harmony to "tighten down" the database "so that it is as secure as it can possibly be."

That "significant security hole" Schlenker described involved concerns over remote access to the site, which was quickly fixed by Harmony, said Diane Welsh, DHFS chief legal counsel.

State government has an "enormous problem" protecting private information and this latest case is "deeply troubling," said Sen. Ted Kanavas, R-Brookfield.

"These have been issues that have been public and widespread," he said. "I just don't get a sense that there's a sense of urgency being applied to solving these."
